

Third Generation Filter Tube Sewing Production Line

Third Generation Filter Tube Sewing Production Line

- This new generation of automatic sewing line for tubular filter bags is an upgraded version of the 2nd-generation. While the strong points with the 2nd-generation are reserved, the new generation adopts new structure and adds a series of new functions which generate higher sewing efficiency, better quality bags, and simpler and safer operations.

Brief introduction of new functions:

1. Automatic cloth connection
 2. Automatic stop for broken thread
 3. Plotting on the side and bottom of bags
 4. Automatic adjustment of bag tension
 - 4.1 Material calibrated before feeding
 - 4.2 Material even drawing from the cloth storage bracket and the strength of drawing is automatically controlled.
 5. Material feeding adjustment guarantees the cloth entering the sewing machine are in line.
 6. Higher sewing speed.
 7. Trade mark spray printing
 8. Automatic length setup
 9. Quantitative cutting
- 90% of the whole machine are aluminum alloy and stainless steel which are decent and easy to maintain. Sharp parts are enclosed for upgraded safety.
